Appendix A - Development of the Core Competency Framework 19
Appendix B - Glossary 21
Protecting children from harm is a key issue for health and social care. The publication of the Scottish Government’s revised National Child Protection Guidance (2010) seeks to take account of recent policy and practice developments and to reflect the principles, values, and National Practice Model of the Getting It Right for Every Child (GIRFEC) approach. Ongoing work will explore the role of the National Child Protection Training Framework (Scottish Executive, 2005) and how best to meet the education and training requirements of the wider multi agency workforce. For this document, NHS Education for Scotland (NES) has focussed specifically on the requirements of the NHSScotland workforce, however this Core Competency Framework has been produced with careful reference to developments in partner agencies.

Purpose and Aims of the Core Competency Framework

This Core Competency Framework has been developed for all disciplines, professions and staff groups undertaking a clinical role within NHSScotland. The twin aims of the framework are (1) to describe the key areas of child protection work that are common and core across all disciplines, professions and staff groups with a clinical role, and (2) to describe the recommended core knowledge and understanding necessary to support these areas of work. Although this framework will be most appropriate for those with an identified role in relation to protecting children, the information it contains will be of interest to anyone who needs to know how to recognise and respond to concerns about children, in the course of their other, more regular duties.

This framework is closely aligned to the NHS Knowledge and Skills Framework (NHS KSF) (Scottish Executive, 2004). It takes the specific dimension HWB3 Protection of Health and Wellbeing as the basis for development, and includes indicative links to other related core and specific dimensions. Those staff groups that do not use the NHS KSF will find they can still use this framework, by locating the areas of child protection work they undertake and then reading across to identify the recommended core knowledge and understanding necessary to support these areas.

This framework is written specifically for the Scottish context. In line with the Revised National Guidance for Child Protection (Scottish Government, 2010), it is based on the principles of the GIRFEC (Scottish Government, 2010) approach. Comprehensive definitions of key terms and concepts can be found in the National Guidance and those definitions are used here, in order to support shared understanding through shared language. A short Glossary is included in Appendix B for convenience; however this framework should be read in conjunction with the National Child Protection Guidance.

For ease of reading, the term ‘child(ren)’ is used throughout this document to refer to infants, children and young people.
Core Competency Framework
Levels 1 - 4
### Level 1: The practitioner will recognise and report situations where there might be a need for protection

<table>
<thead>
<tr>
<th>Indicators</th>
<th>Competency Statements</th>
<th>Knowledge and Understanding</th>
<th>KSF</th>
</tr>
</thead>
</table>
| The worker: a) identifies signs that people are at risk and that there might be a need for protective measures. | • Utilise the GIRFEC National Practice Model as appropriate  
  • Use the Wellbeing Indicators as the broad framework to identify a child’s needs  
  • Use the My World Triangle as the starting point for considering what risks might be present  
  • Identify any areas of unmet need and any aspects of the child’s well-being that give cause for concern | • Overview of the principles and core components of the GIRFEC approach  
  • Clear understanding of the eight Wellbeing Indicators  
  • Basic requirements of what children need from the people who look after them, including an understanding of the potential impact of adversity in parents’/carers’ lives  
  • Basic understanding of the different dimensions of children’s growth and development – physical, social, educational, emotional, spiritual and psychological  
  • The general impact of the wider world of family, friends and community on children, including general factors affecting unborn children  | C1  
  C2  
  HWB2  
  HWB3 |
| b) reports any suspicions of risk to the appropriate people and/or organisations consistent with legislation, policies and procedures. | • Share essential and relevant information to help identify emerging concerns and unmet needs  
  • Seek appropriate support and guidance from senior colleagues and line manager  
  • Describe any concerns clearly, including the possible impact the concern is having on the child or young person | • The key indicators of abuse and neglect  
  • The kinds of events, characteristics and circumstances that can give rise to concerns about children, including unborn children  
  • General principles of information-sharing, including the distinction between circumstances where there is a need for consent and where there is not  
  • Availability of specialist support and advice and how to access it  | |
| c) records and reports any information that is available on the risks. | • Give reasons and evidence to support the concerns raised  
  • Share essential and relevant information about whether there have been any previous incidents or similar concerns | • Local policies, protocols and systems for sharing information about children and their families  
  • Information needs of those receiving information about children and their families  
  • Local policies, protocols and systems (including chronologies) for recording information about children and their families | |
## Level 2: The practitioner will contribute to protecting children at risk

Using the Core Competency Framework

Using this framework is not about every employee attending a set number of hours of training (Scottish Executive, 2004). It is about reflecting on what employees are being asked to do to protect children, and identifying what they need to know and understand in order to do it. Then, it is about reviewing what employees already know and understand, and identifying appropriate opportunities for development.

Identifying the Appropriate Level

In accordance with the NHS KSF guidance (Scottish Executive, 2004), progression through the four levels of this framework is characterised by:

- Moving from recognising potential risks and hence a possible need for protection to actively addressing risks through a wide range of protective measures
- Increasing knowledge and skills in relation to the seriousness and frequency of risks
- An increasing understanding of the legislative context and its application in different circumstances
- An increasing involvement in inter-agency and partnership working at a range of levels to improve the protection of the public (Scottish Executive, 2004)

The simplest way to identify the appropriate level is to examine the descriptive titles for each level, and then use those, together with the Indicators, as a guide to see which level best reflects the work undertaken. The Competency Statements and Knowledge and Understanding sections of this framework are incremental and build on previous levels; for example, it is assumed that a practitioner using Level 3 will be confident with all aspects of levels 1 and 2.

Employer and employee are best placed to decide the most appropriate level for a particular post, because similar roles can vary considerably in their work functions according to local arrangements. However, the following examples provide guidance about the levels most likely to suit some specific job roles. It is not possible to include examples that address every situation, and so the following illustrations are intended to show how the levels of the framework could be applied in particular circumstances.

At level 1 the practitioner recognises and reports situations where there might be a need for protection.

For example, John is a speech and language therapist working with children. Some of the children he works with are already known to be at risk of harm, and others could be in need of protection but are not currently known to protective services. Communication difficulties can add another layer of vulnerability for some children, because they can find it harder to let someone know they need help. John needs to understand the kinds of experiences that can affect children’s wellbeing, including the kinds of family circumstances that can indicate a need for protection, or that might place a child at increased risk of harm. Although John would not be expected to make decisions about level of risk or protective interventions, he does need to know what kinds of things should make him concerned, what to do about those concerns and what information he needs to record. He also needs to understand that repeated low level concerns, and combinations of concerns, can present a significant risk to children’s wellbeing. This level covers the basic requirements of recognising and reporting situations where children might need protection.
At level 2 the practitioner contributes to protecting people (children) at risk.

For example, Sanjay is a mental health nurse, and he works with adults who are drug and alcohol dependent. He does not work directly with children, but many of the adults he supports, are parents of children of all ages. Sanjay needs to actively consider the needs of his clients’ children, and must be able to contribute to an assessment of children’s circumstances when necessary. This means he needs to understand how aspects of parenting capacity can be affected by substance misuse, including for example the ability to provide a safe and secure environment, the ability to be emotionally available to the child, and the ability to be able to anticipate and meet the child’s needs in an age-appropriate way. Sanjay needs to understand the kinds of difficulties facing these children and their families, and that children suffering negative effects of parental substance misuse can use a range of ways to communicate what they feel about what is happening to them. He needs to know that experiences of abuse and neglect can have consequences for the children involved. Sanjay must be able to recognise when children might need additional help or protection, and be able to share this information with the appropriate professionals. This level contains information about working with situations where children are known to be at risk of harm, which is not included at level 1.

At level 3 the practitioner implements aspects of a protection plan and reviews its effectiveness.

For example, Maria is a health visitor, working with a wide range of families. She often supports children who are very vulnerable, and her work involves regular collaboration with other professionals such as social workers and nursery teachers. Maria frequently supports child protection plans by sharing her experience of working with particular families, or her observations of interactions between parents and their children. In order to do this effectively, she needs to know how to systematically gather information about the lived experience of the child, as well as how to record and make sense of this information in a way that helps guide any interventions. Maria needs to have a clear understanding of the kind of parenting that best supports children of different ages, as well as a sound grasp of the implications of abuse and neglect. She needs to be able to identify and respond to changes in the child’s experience, for example an escalation of difficulties or an improvement in circumstances. In particular, she must be able to see when additional help or protection is needed, and know how to share information, including clear evidence for her concerns, quickly and appropriately. Maria is never solely responsible for a child’s protection plan, rather she works together with colleagues in her own agency and other agencies in order to support and inform judgements about risk, and decision-making about appropriate interventions. This level has an increased focus on theoretical frameworks and research evidence for practice, which is different from levels 1 and 2.

At level 4 the practitioner develops and leads on the implementation of an overall protection plan.

This does not mean co-ordinating a child’s protection plan, it means playing a senior role in leading (with others) the protective interventions for which the practitioner’s NHSScotland service or Board takes responsibility. For example, Amreen works as a Nurse Consultant for Child Protection, ensuring her NHS Board’s policies and procedures enable timely, appropriate and proportionate help for children who need it. In order to achieve this, Amreen needs to understand the role NHSScotland plays in the protection of children. She needs a clear grasp of the up-to-date policy context, underlying philosophies and methodologies for protecting children in Scotland. Amreen needs to be able to review and interpret (with others) guidance, advice and legislation, so that she can take the lead in developing action plans in response to recommendations – for example, from Significant Case Reviews and Case Reviews. She needs to be confident in assessing how an organisational action plan will impact on outcomes for children, and be able to play a lead role in quality assurance and self-evaluation processes. Amreen also requires a comprehensive knowledge of the research evidence that underpins approaches to the protection of children, in order that she can support practice by leading on the dissemination of findings. This level differs from levels 1, 2 and 3 by focusing on expert provision of strategic and operational consultation and advice across service(s) and organisation(s).
Identifying Appropriate Learning and Development Opportunities

Each profession and staff group will vary in what they have learned in their initial programmes of education and also in their practice experience. In addition there is a range of different types of learning and development activities including (but not restricted to) reflective practice; distance learning; work based learning; private study; e-learning; further and higher education programmes; training courses; and conferences. Child Protection training will be available locally through NHS Boards and Child Protection Committees and this framework will help practitioners and their managers to identify the most appropriate resources and opportunities.

For example, Fergus is a Psychologist working with a Child and Adolescent Mental Health Service. He has identified that Level 2 is appropriate for his role and can use the Knowledge and Understanding points to decide whether he requires any further learning and development in this area. Fergus’s professional psychology training has equipped him with a clear understanding of most aspects of Level 2, for example how to engage and work with children and families and the impact of abuse and neglect. He is confident working with parents and understands how their approach to parenting can be affected by different factors. Fergus feels he needs to develop his understanding of interagency working, in particular the legal framework around sharing information and the local systems and protocols that support the protection of children. He can also use Level 1 because in this core competency framework, each level builds on previous levels. This helps Fergus identify the GIRFEC National Practice Model as something else he needs to learn more about. Fergus can now seek training courses that include these themes in their learning outcomes, raise these issues with colleagues in supervision sessions, find a conference exploring these topics and/or undertake private study in these areas.

In a different context, Maureen works as a training manager and her NHS Board have asked her to recommend training courses in child protection for a range of Primary Care staff groups. Using the framework, Maureen and the staff groups can identify the required areas of knowledge and understanding, and then map these to the learning outcomes of available training courses. Maureen will be able to see the courses that best meet the needs of different staff groups, and she will also be able to see if there are particular gaps that are not currently met by existing provision. If Maureen decides to commission a bespoke training course, she will be able to use the required areas of knowledge and understanding she has identified, to inform potential providers about appropriate learning outcomes and content.

Appendix A - Development of the Core Competency Framework
The Scottish Government asked NHS Education for Scotland (NES) to develop this Core Competency Framework. The Chief Nursing Officer Directorate, the Child and Maternal Health Directorate, the Child Protection Policy Unit and the Getting It Right for Every Child Team have overseen its development and supported the project team at NES throughout. The project team also worked closely with a small reviewing group who shaped and commented on early drafts of the Competency Statements and Knowledge and Understanding sections. This reviewing group included representatives from Higher Education providers of postgraduate child protection programmes; members of the national Child Protection Committees Training Group; and members of the Scottish Child Protection and Vulnerable Children Lead Nurses Executive Group. Advice was sought from the national NHS Knowledge and Skills Framework (KSF) Team. Lastly, the framework draws heavily on the evaluation and briefings of the Getting It Right for Every Child Highland pathfinder project (Scottish Government, 2010), as well as the multi agency inspection reports from HMIe (2009) and the recommendations therein.
This Glossary of Terms is taken from the National Guidance for Child Protection in Scotland (Scottish Government, 2010) and should be read in conjunction with the definitions of key concepts therein.

**Child**
A child can be defined differently in different legal contexts. Under the Children (Scotland) Act 1995, a child is defined in relation to the powers and duties of the local authority. However the importance of context is critical for those aged between 16 and 18. Those in this age group who are still subject to a supervision requirement by a Children’s Hearing can still be viewed as a child. Moreover, the United Nations Convention on the Rights of the Child applies to anyone under the age of 18.

**Child Abuse**
Abuse (and neglect) is a form of maltreatment of a child. Somebody may abuse a child by inflicting, or by failing to act to prevent, significant harm to the child. In a child protection context, there are three different types of abuse that can be identified. Physical abuse is the causing of physical harm to a child or young person. Emotional abuse is persistent emotional neglect or ill treatment of a child causing severe and persistent adverse effects on the child’s emotional development. Sexual abuse is any act that involves the child in any activity for the sexual gratification of another whether or not it is claimed that the child either consented or assented.

**Child Protection**
Child protection is when a child requires protection from child abuse or neglect. For a child to require protection, it is not required that child abuse or neglect has taken place, but rather a risk assessment has identified a likelihood or risk of significant harm from abuse or neglect.

**Getting It Right for Every Child (GIRFEC)**
The GIRFEC approach is a Scotland wide programme of action to improve the well being of all children and young people. It’s primary components include: a common approach to gaining consent and sharing information where appropriate; an integral role for children, young people and families in assessment, planning and intervention; a co-ordinated and unified approach to identifying concerns, assessing needs, agreeing actions and outcomes, based on the wellbeing indicators; a Named Person in universal services; a Lead professional to coordinate and monitor activity where necessary; and a skilled workforce within universal services that can address needs and risks at the earliest possible point.

**Harm/Significant Harm**
‘Harm’ means the ill treatment or the impairment of health or development of the child – in this context, ‘development’ can mean physical, intellectual, emotional, social or behavioural development and ‘health’ can mean physical or mental health. Child Protection is closely linked to the risk of significant harm – whether the harm suffered, or likely to be suffered, by a child is ‘significant’ is determined by comparison of the child’s health and development with what might be reasonably expected of a similar child.

**My World Triangle**
As part of the GIRFEC ‘practice model’ for assessing risk and need, the My World Triangle is a framework that provides a starting point for considering what risks might be present in a child’s life. It focuses attention on the three dimensions of a child’s world: the child themselves; their family; and their wider environment.

**Resilience Matrix**
The Resilience Matrix is a tool for analyzing what the information gathered around a particular child protection concern might mean for a child. It provides practitioners with a framework for weighing up the particular risks against any protective factors for the individual child in relation to resilience, vulnerability, adversity and the protective environment.

**Risk**
In the context of the National Guidance for Child Protection in Scotland, risk is the likelihood or probability of a particular outcome given the presence of factors in a child’s or young person’s life. What is critical with respect to child protection is the risk of significant harm from abuse or neglect.

**Wellbeing Indicators**
The Wellbeing Indicators are the broad framework for identifying a child’s needs where potential child protection (and other) concerns are identified. They do so under eight headings – safe; healthy; achieving; nurtured; active; respected; responsible; and included – which are used to identify what needs to change in the child’s plan (or child protection plan) and how progress on outcomes should be monitored and recorded.
