1. Background and purpose of the framework
Across Scotland there are approximately 26,000 adults and 16,000 school-aged children and young people who have learning disabilities (Scottish Government, 2013). People with learning disabilities, their families and carers have the right to be valued as individuals and lead healthy, fulfilling, inclusive lives. They have the right to be partners in safe, effective and person-centred care and, where required, receive additional specialist support.

People with learning disabilities have the right to access the full range of services across Scotland available to all, free from discrimination and protected from harm. This educational framework is a resource for anyone who seeks to reduce the inequalities people with learning disabilities experience and ensure that the support and service they offer meets the needs of people with learning disabilities. This framework is a human rights framework, informed by and developed in partnership with people who have learning disabilities.

Scotland’s strategy for people with learning disabilities – *The Keys to Life* was published in 2013, *An Implementation Framework* (Scottish Government, 2015a) followed in 2015. The implementation Framework aims to involve a range of partners and stakeholders to deliver change. The implementation framework highlights a commitment to use human rights based methods to delivery, including the PANEL and FAIR approach (see section 3, pages 10 and 11). The implementation framework sets out the Scottish Governments vision for people with learning disabilities in Scotland:

“…that all citizens of Scotland who have learning disabilities live longer, healthier lives; are supported to **Participate** fully in all aspects of society; **Prosper** as individuals and are valued contributors to a **Fair** and equal Scotland.”

(Scottish Government, 2015a, p.8)

The *Keys to Life* implementation framework outlines four strategic outcomes. The *Keys to Life* is grounded in human rights. The implementation framework was developed around the articles and principles of the United
Nations Convention on the Rights of Persons with Disabilities (UN 2006). The implementation framework is intended to protect the rights and dignity of people with learning disabilities, ensuring the full enjoyment of human rights by people with learning disabilities. Like the Convention, the implementation framework views people with learning disabilities as full and equal members of society, with human rights.

This educational framework for health equalities for people with learning disabilities aims to equip practitioners\(^1\) with the knowledge and skills to help reduce health inequalities that affect people with learning disabilities.

---

1 “Practitioner” is used throughout this framework to refer to anyone who has a formal role with a person with a learning disability.
2. Developing the educational framework for health equalities
The process of developing the educational framework for health equalities had three parts.

1. A literature search on health equalities and health inequalities was undertaken. Very little literature was found on health equalities. Findings from the literature search highlighted literature under a number of themes and these are explored in Section 3.5 page 13 of this framework. The educational framework draws heavily on Promoting Excellence (NES & SSSC, 2011). Promoting Excellence describes the knowledge and skills that are required by staff working with people with dementia at four different levels. Similar levels are used with this framework.

2. An initial framework was written, then redrafted following comments received from a number of critical readers (see Appendix 1).

3. Three consultation events were held, attended by individuals from health and social care sectors as well as people with learning disabilities. Following these events a second draft was written for comment.

People with learning disabilities who attended the consultation event have now formed the NHS Education for Scotland Learning Disability Forum (see Appendix 2). They have continued to refine the framework and the quotes that feature throughout the text come from them.
3. The evidence and underpinning human rights
3.1 A rights-based approach

Following from the development of the *Keys to Life* implementation framework, this educational framework is grounded within a human rights based approach. The four strategic outcomes highlighted within the *Keys to Life* implementation framework link directly to both the National Health and Wellbeing Outcomes (Scottish Government, 2015b) and the integration planning and delivery principles, both of which are grounded in a human rights-based approach. Human rights are based on the principle that people should be equal and free to participate as full and active members of society. They belong to us all, including people with learning disabilities and are the basic rights and freedoms we enjoy as human beings, allowing us to live with dignity and participate in our communities equally.

A human rights-based approach is a way of empowering people to know and claim their rights. It increases the ability and accountability of individuals, organisations and relevant practitioners who are responsible for respecting, protecting and fulfilling rights. This means giving people greater opportunities to participate in shaping the decisions that impact on their rights.

The UN Convention on the Rights of Persons with Disabilities (2006) sets out the following principles:

- respect for inherent dignity
- non-discrimination
- full, effective participation and inclusion in society
- respect for difference
- equality of opportunity
- accessibility
- equality between men and women
- respect for the evolving capacities of children with disabilities.
These overarching principles are used throughout the framework.

The Scottish National Action Plan (SNAP) on Human Rights (Scottish Human Rights Commission 2013) recognises that human rights impact on all of us through a basic assumption of humane, dignified, fair and equal treatment in our homes, schools, workplaces and communities. As part of its commitment to SNAP, the Scottish Government (with others) is leading a programme of work to ensure that human rights is at the heart of health and social care integration.

SNAP advocates the use of the PANEL and FAIR approaches. The PANEL principles are important in applying a human rights-based approach in practice.
### 3.2 The PANEL principles

These principles uphold the rights of everyone to person-centred care and support.

<table>
<thead>
<tr>
<th>PANEL principles</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Participation</strong></td>
<td>Everyone has the right to participate in decisions that affect them. Participation must be active, free and meaningful and give attention to issues of accessibility, including access to information in a form and a language that can be understood.</td>
</tr>
<tr>
<td><strong>Accountability</strong></td>
<td>Accountability requires effective monitoring of human rights standards. For accountability to be effective, there must be appropriate laws, policies, administrative procedures and mechanisms of redress to secure human rights.</td>
</tr>
<tr>
<td><strong>Non-discrimination and equality</strong></td>
<td>A human rights-based approach means that all forms of discrimination must be prohibited, prevented and eliminated. It also requires the prioritisation of those in the most vulnerable situations who face the biggest barriers to realising their rights.</td>
</tr>
<tr>
<td><strong>Empowerment</strong></td>
<td>People should understand their rights and be fully supported to participate in the development of policy and practices that affect their lives. People should be able to claim their rights where necessary.</td>
</tr>
<tr>
<td><strong>Legality</strong></td>
<td>The full range of legally protected human rights must be respected, protected and fulfilled. A human rights-based approach requires the recognition of rights as legally enforceable entitlements and is linked to national and international human rights law.</td>
</tr>
</tbody>
</table>
### 3.3 The FAIR approach

The Scottish Human Rights Commission has also developed the FAIR approach to help apply human rights in practice. The FAIR approach can be used as a means of reaching a balanced and just solution in difficult situations. The FAIR chart, below, outlines the steps that can be taken in more detail.

<table>
<thead>
<tr>
<th>FAIR approach</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Facts</strong></td>
</tr>
<tr>
<td>What is the experience of the individual?</td>
</tr>
<tr>
<td>Is the individual being heard and, if not, do they require support to do so?</td>
</tr>
<tr>
<td>What are the important facts to understand?</td>
</tr>
<tr>
<td><strong>Analysis of rights at stake</strong></td>
</tr>
<tr>
<td>What are the human rights or issues at stake?</td>
</tr>
<tr>
<td>Is the right to life or the right not to be subjected to inhuman or degrading treatment at stake? If so, these rights are absolute and cannot be restricted.</td>
</tr>
<tr>
<td>Can the right be restricted? What is the justification for restricting the right?</td>
</tr>
<tr>
<td>Is the restriction on the right ‘proportionate’? That is, is it the minimum necessary restriction to meet the aim or a ‘sledgehammer being used to crack a nut’?</td>
</tr>
<tr>
<td><strong>Identification of shared responsibilities</strong></td>
</tr>
<tr>
<td>What changes are necessary? Who has responsibilities for helping to make the necessary changes?</td>
</tr>
<tr>
<td><strong>Review actions</strong></td>
</tr>
<tr>
<td>Have the action taken been recorded and reviewed and has the individual affected been involved?</td>
</tr>
</tbody>
</table>

It is intended that this approach will be used in practice by practitioners to aid their decision-making.
3.4 The National Health and Wellbeing Outcomes

The National Health and Wellbeing Outcomes (Scottish Government, 2015b) apply across all integrated health and social care services, ensuring that NHS boards, local authorities and integration authorities are clear about their shared priorities by bringing together responsibility and accountability for delivery.

The outcomes provide a strategic framework for planning and delivering health and social care services. They focus on improving experiences and quality for people using services, their families and carers, and improving how services are provided. They also set out the difference integrated health and social care services should make for people.

There are nine National Health and Wellbeing Outcomes that apply to integrated health and social care. NHS boards, local authorities and the integration authorities will work together to ensure that the outcomes are meaningful to people in their area, including people with learning disabilities.

1. People are able to look after and improve their own health and wellbeing and live in good health for longer.
2. People, including those with disabilities or long-term conditions or who are frail, are able to live, as far as reasonably practicable, independently and at home or in a homely setting in their community.
3. People who use health and social care services have positive experiences of those services and have their dignity respected.
4. Health and social care services are centred on helping to maintain or improve the quality of life of people who use those services.
5. Health and social care services contribute to reducing health inequalities.
6. People who provide unpaid care are supported to look after their own health and wellbeing, including to reduce any negative impact of their caring role on their own health and wellbeing.
7. People who use health and social care services are safe from harm.
8. People who work in health and social care services feel engaged with the work they do and are supported to continuously improve the information, support, care and treatment they provide.

9. Resources are used effectively and efficiently in the provision of health and social care services.

3.5 The Health Equality Framework

In 2011, the Learning Disability Public Health Observatory in England (Emerson et al. 2011) examined the evidence on health and health inequalities for people with learning disabilities. The Observatory found that people with learning disabilities experienced health inequalities as a result of factors that were common across five themes:

- social determinants
- genetic and biological determinants
- communication difficulties and reduced health literacy determinants
- personal health behaviour and lifestyle risks
- deficiency in access to, and quality of, health provision.

In 2012 Strengthening the Commitment (Scottish Government 2012), the report of the UK modernising learning disability nursing review called upon nurse leaders to develop and apply outcomes focused measurement frameworks to evidence their contribution to improving person centred health outcomes. The Health Equalities Framework (HEF) (Atkinson et al., 2015) was developed as a response to this recommendation. The HEF is an outcomes tool based on the determinants of health inequalities designed to help commissioners, providers, people with learning disabilities and their families understand the impact and effectiveness of services and was developed around the five common themes above. The HEF was made freely available across the UK.

The overarching principles of human rights for people with learning disabilities are used throughout this educational framework, the five themes outlined in the HEF provide assurance that services working with people with learning disabilities meet their duties under equality legislation (HMSO 2010). The knowledge and skills required by individuals who work with people with learning disabilities are outlined within the five HEF themes, which support the delivery outcomes of both the Keys To Life and the National Health and Wellbeing Outcomes.
4. How the framework should be used

The framework can be used in a number of ways by:

- individual practitioners (in conjunction with the appropriate generic and/or professional frameworks and guidance) to help them understand the values base and knowledge and skills expected of them in enabling people with learning disabilities to achieve health equality

- individual practitioners with their managers/supervisors to identify how they are performing

- organisations to ensure practitioners have the knowledge and skills to tackle health inequalities and plan staff development activities to reflect the aspirations set out in the framework

- organisations to shape the design and delivery of future-focused vocational and professional undergraduate and postgraduate education and training

- people with learning disabilities, their families and carers as an information resource to ensure they are aware of and can exercise their rights in achieving health equality.
5. The structure of the framework
5.1 Levels of knowledge and skills

Each level defines the knowledge, skills and behaviours specific to the practitioner’s role in relation to reducing health inequalities experienced by people with learning disabilities. Rather than being hierarchical, the levels are concerned with levels of responsibility in relation to working with people with learning disabilities. Each level therefore defines the knowledge and skills in reducing health inequalities for people with learning disabilities specific to a practitioner’s role, rather than to his or her seniority within the organisation or profession.

The Enhanced Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who have more regular and intense contact with people with learning disabilities, provide specific interventions, and/or direct/manage care and services.

The Specialist Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who by virtue of their role and practice setting play a specialist role in reducing inequalities for people with learning disabilities.

The skills outlined at each level are constructed in an incremental way: for example, practitioners working at Enhanced Practice Level would also possess the knowledge and skills described at all preceding levels. Each individual practitioner and his or her employer must take responsibility for ensuring that they correctly interpret and apply the content and aspirations of the framework in relation to their roles in working with people with learning disabilities, their families and carers.
6. Informed Practice Level in Health Equalities for People with Learning Disabilities
“I couldn’t understand the instructions from the hospital.”

“I always see the same GP – this means he knows me really well.”
The Informed Practice Level in Health Equalities for People with Learning Disabilities provides the baseline knowledge and skills required by all practitioners.

Social determinants

Outcome

People with learning disabilities feel empowered and enabled to exercise rights and choice and to be treated with dignity and equity.

People with learning disabilities live in settled and safe family accommodation or their own tenancy/ownership, reflecting their personal choice.

What practitioners know (knowledge)

- Appreciate that people with learning disabilities have a right to a life that is meaningful and valued.
- Understand that a good and valued quality of life should reflect the priorities of the person with learning disabilities, their family and carers.
- Understand what is meant by the term person-centred support in relation to people with learning disabilities.
- Recognise the characteristics of high-risk accommodation or adverse environments that prevent health equality.
- Awareness of the agencies in both health and social care that can be used for referral to more appropriate accommodation.

What practitioners are able to do (capability/skill/ability)

- Interact with people with learning disabilities, their families and carers in a way that recognises their wishes and priorities.
- Seek support and advice from professionals and family carers where there may be communication issues.
- Take the information in relation to accommodation and refer to the relevant professional or agency.
The Informed Practice Level in Health Equalities for People with Learning Disabilities provides the baseline knowledge and skills required by all practitioners.

Social determinants

**Outcome**

People with learning disabilities are engaged in meaningful activities, paid employment or education.

People with learning disabilities have sufficient financial support.

People with learning disabilities have a range of social networks.

<table>
<thead>
<tr>
<th>What practitioners know (knowledge)</th>
<th>What practitioners are able to do (capability/skill/ability)</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Awareness of the importance of meaningful engagement for the person with a learning disability.</td>
<td>- Seek support from/make a referral to relevant others to engage the person with a learning disability in meaningful activities of their choice.</td>
</tr>
<tr>
<td>- Awareness of the role of other professionals and family carers who can support the identification of meaningful activity.</td>
<td></td>
</tr>
<tr>
<td>- Awareness of the importance of financial security for the person with a learning disability.</td>
<td>- Take information in relation to finances and refer to the relevant professional or agency.</td>
</tr>
<tr>
<td>- Awareness of the professionals and family carers who could aid the person with a learning disability to access more information about their finances.</td>
<td></td>
</tr>
<tr>
<td>- Awareness of the importance for the person with a learning disability in engaging in activities in the local community.</td>
<td>- Ability to enable the person with a learning disability to engage in community activities.</td>
</tr>
<tr>
<td>- Awareness of local activities in the community and the role of other professionals, family carers and organisations that can support access and engagement.</td>
<td></td>
</tr>
</tbody>
</table>
The **Informed Practice Level in Health Equalities for People with Learning Disabilities** provides the baseline knowledge and skills required by all practitioners.

### Social determinants

**Outcome**

*People with learning disabilities are not subject to discrimination linked to ethnicity, gender, behaviours, sexuality, appearance, physical features, chronic illness or speech differences.*

<table>
<thead>
<tr>
<th>What practitioners know (knowledge)</th>
<th>What practitioners are able to do (capability/skill/ability)</th>
</tr>
</thead>
<tbody>
<tr>
<td>➤ Awareness of factors that may lead to discrimination against people with learning disabilities.</td>
<td>➤ Ability to ensure that people with learning disabilities and their families are not affected by discrimination.</td>
</tr>
<tr>
<td>➤ Understand the effects of stigma and fear of stigma associated with learning disabilities.</td>
<td>➤ Engage with people with learning disabilities and their families in a way that recognises the negative impact of stigma and discrimination.</td>
</tr>
<tr>
<td>➤ Understand the effects of stigma on families and family carers.</td>
<td>➤ Model non-discriminatory practice and behaviour when working with people with learning disabilities.</td>
</tr>
</tbody>
</table>
The **Informed Practice Level in Health Equalities for People with Learning Disabilities** provides the baseline knowledge and skills required by all practitioners.

**Genetic and biological determinants**

**Outcome**

*People with learning disabilities have both their physical and mental health comprehensively assessed and understood.*

*People with learning disabilities have a right to an individual health passport.*

**What practitioners know (knowledge)**

- Awareness of the importance of physical and mental health assessments.
- Knowledge of individual health passports.

**What practitioners are able to do (capability/skill/ability)**

- Ability to refer the person with a learning disability for physical or mental health assessments.
- Use health passports to gain an understanding of the needs of people with learning disabilities.
The Informed Practice Level in Health Equalities for People with Learning Disabilities provides the baseline knowledge and skills required by all practitioners.

Communication difficulties and health literacy

**Outcome**

*People with learning disabilities feel they can communicate effectively with their families and carers.*

<table>
<thead>
<tr>
<th>What practitioners know (knowledge)</th>
<th>What practitioners are able to do (capability/skill/ability)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Awareness that people with learning disabilities may use alternative methods of communication.</td>
<td>Ability to seek support to develop knowledge and skills to communicate effectively.</td>
</tr>
<tr>
<td>Awareness of Augmentive and Alternative Communication (AAC) systems and where to seek support.</td>
<td>Ability to refer to appropriate professional for further communication assessments.</td>
</tr>
<tr>
<td>Knowledge that people with learning disabilities may have physical health problems and that they may not be able to communicate this to their families and carers.</td>
<td>Ability to communicate with each person with a learning disability.</td>
</tr>
</tbody>
</table>
The Informed Practice Level in Health Equalities for People with Learning Disabilities provides the baseline knowledge and skills required by all practitioners.

**Personal health behaviour and lifestyle risks**

**Outcome**

*People with learning disabilities have the highest attainable level of physical, mental, social and emotional wellbeing.*

<table>
<thead>
<tr>
<th>What practitioners know (knowledge)</th>
<th>What practitioners are able to do (capability/skill/ability)</th>
</tr>
</thead>
<tbody>
<tr>
<td>➤ Understand the potential physical, social and environmental hazards and risks to the wellbeing and safety of people with learning disabilities.</td>
<td>➤ Recognise when the physical or social environment could compromise the health and safety of people with learning disabilities.</td>
</tr>
<tr>
<td>➤ Understand the effects of fragility, adversity and isolation on people with learning disabilities.</td>
<td>➤ Recognise when a person with a learning disability may have a physical health problem and respond appropriately.</td>
</tr>
<tr>
<td>➤ Understand the need for support or environmental adjustment to maintain active engagement in community life and valued activities.</td>
<td>➤ Support people with learning disabilities to manage situations where the environment is challenging or presents risks to them.</td>
</tr>
<tr>
<td>➤ Awareness of the role of other professionals and family carers who can support the active engagement of the person with learning disabilities in community life and valued activities.</td>
<td>➤ Recognise when a person with a learning disability exhibits behaviours that are perceived as challenging and respond appropriately.</td>
</tr>
<tr>
<td>➤ Knowledge of how to respond to a person with a learning disability who exhibits behaviours that are perceived as challenging.</td>
<td>➤ Seek support from/make a referral to relevant others to support active engagement in community life and valued activities.</td>
</tr>
</tbody>
</table>
Personal health behaviour and lifestyle risks

**Outcome**

*People with learning disabilities feel empowered and enabled to maintain their own safety.*

**What practitioners know (knowledge)**

- Understand that people with learning disabilities may be at risk of experiencing neglect, harm or abuse – physical, sexual, psychological and financial.
- Understand that legislation exists to protect the rights of people with learning disabilities and safeguard them against any potential risk or harm.
- Awareness of local adult protection protocol and policy.
- Awareness of the benefits of risk enablement in enabling people to have more choice and control.
- Awareness of the role of other professionals, families and carers who can support the person with learning disabilities in taking appropriate risks that provide opportunities and benefits.

**What practitioners are able to do (capability/skill/ability)**

- Recognise and respond when a person with a learning disability is experiencing neglect, harm or abuse.
- Take appropriate action according to organisational procedures when a person with a learning disability may be experiencing neglect, harm or abuse.
- Support the person with a learning disability to take informed risks that provide opportunities and benefits for him or her.
### Equal Health

<td>➤ Ability to seek support and guidance to overcome barriers and make reasonable adjustments.</td>
</tr>
</tbody>
</table>
7. Skilled Practice Level in Health Equalities for People with Learning Disabilities
I had a great experience when I was admitted to hospital. The staff managed to get someone to look after my cats.

I managed to do the bowel screening test after staff went through it with me using the book without words.
The **Skilled Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

---

### Social determinants

#### Outcome

*People with learning disabilities feel empowered and enabled to exercise rights and choice and to be treated with dignity and equity.*

**People with learning disabilities live in settled and safe family accommodation or their own tenancy/ ownership, reflecting their personal choice.**

#### What practitioners know (knowledge)

- Knowledge of the human rights of people with learning disabilities.
- Knowledge that people with learning disabilities have a right to a life that is meaningful and valued.
- Knowledge that a good and valued quality of life should reflect the priorities of the person with learning disabilities, their family and carers.
- Knowledge of what is meant by the term person-centred support in relation to people with learning disabilities.
- Knowledge of the factors that make accommodation inappropriate.

#### What practitioners are able to do (capability/skill/ability)

- Promote awareness of the human rights of people with learning disabilities, their families and carers.
- Support people with learning disabilities, their families and carers in a way that recognises their wishes and priorities.
- Support people with learning disabilities, their families and carers to have a good and valued quality of life that reflects the person’s priorities.
- Support people with learning disabilities in a person-centred manner.

- Identify when a person with a learning disability lives in an inappropriate setting.
- Make judgements on whether the setting is compatible with meeting the person’s needs.
The *Skilled Practice Level in Health Equalities for People with Learning Disabilities* outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

Equal Health
An Educational Framework on Health Equalities for People with Learning Disabilities

The Skilled Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

Social determinants

Outcome

People with learning disabilities feel safe and secure and are able to be as independent as possible.

What practitioners know (knowledge)

- Knowledge of the services and supports that can help people with learning disabilities, their families and carers to maintain valued activities, social engagement and inclusion.

- Understand that stigma and the impact of learning disability may lead to social isolation and withdrawal from, or lack of creation of, valued social connections and activities.

- Understand how assistive and innovative technology can positively support and promote the independence, human rights and quality of life of people with learning disabilities.

What practitioners are able to do (capability/skill/ability)

- Provide information and access to services and supports that help people with learning disabilities, their families and carers to maintain valued activities, social engagement and inclusion.

- Prevent social isolation by creating valued social connections and activities.

- Use assistive technology where appropriate to promote people’s independence and quality of life.

- Appropriately refer to other agencies/professionals to access support.
The **Skilled Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

### Social determinants

<table>
<thead>

</table>
- Awareness of the discrimination that a person with a learning disability may experience.  
- Knowledge of the law and legal processes relating to hate crime in Scotland. |  
- Ability to challenge any discrimination a person with learning disability is experiencing.  
- Ability to report hate crime. |
Equal Health
An Educational Framework on Health Equalities for People with Learning Disabilities

The **Skilled Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

---

Genetic and biological determinants

**Outcome**

*People with learning disabilities have both their physical and mental health comprehensively assessed and understood.*

**What practitioners know (knowledge)**

- Understand the importance of physical and mental health assessments.
- Understand the implications of the results of physical and mental health assessments.
- Understand the importance of including family carers and recognising their role in physical and mental health assessments.
- Understand diagnostic overshadowing.
- Understand that the cause of the person’s learning disability can predispose him or her to certain health conditions.

**What practitioners are able to do (capability/skill/ability)**

- Contribute or signpost people to an annual health check.
- Ability to refer to the relevant professional, depending on information in the physical and mental health assessments.
- Involve family carers in physical and mental health assessments.
- Recognise when diagnostic overshadowing is occurring.
- Recognise health conditions and refer appropriately.

*People with learning disabilities have a right to an individual health passport.*

- Knowledge and understanding of the content of an individual health passport.
- Knowledge of how and when the individual health passport should be used.

- Contribute to the development of an individual health passport.
- Use the individual health passport to underpin care and support for people with learning disabilities.
The **Skilled Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

### Personal health behaviour and lifestyle risks

**Outcome**

**People with learning disabilities have adequate activity.**

**What practitioners know (knowledge)**

- Knowledge of the importance of physical activity for people with learning disabilities.
- Understand the restrictions a person with a learning disability may face in relation to physical activity.
- Understand the role of other professionals where there are issues with, or barriers to, physical activity.
- Recognise the role and expertise of families and carers in supporting physical activity.
- Awareness of the range of multi-sensory, therapeutic, recreational and active support activities that promote wellbeing and independence.
- Awareness of specialist services and professionals that support/enable access to a range of appropriate and therapeutic activities.

**What practitioners are able to do (capability/skill/ability)**

- Engage with people with learning disabilities, their families and carers to inform them about the importance of physical activity.
- Encourage physical activity for people with learning disabilities.
- Seek advice/refer to specialist professionals where there are barriers to accessing physical activity.
- Utilise the expertise of families and carers in supporting physical activity.
- Encourage and support people with learning disabilities to participate in therapeutic, recreational and active support activities.
- Refer to specialist services and professionals to support/enable access to a range of appropriate and therapeutic activities.
### Personal health behaviour and lifestyle risks

#### Outcome

**People with learning disabilities maintain an appropriate weight.**

The **Skilled Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required by all practitioners who have direct and/or substantial contact with people who have learning disabilities.

### Personal health behaviour and lifestyle risks

#### Outcome

*People with learning disabilities do not engage in the harmful use of alcohol, cigarettes and non-prescription substances or other harmful substances.*

*People with learning disabilities engage in, and are educated about, healthy sexual activity.*

#### What practitioners know (knowledge)

- Awareness of the effects of harmful substances to the health of a person with a learning disability.
- Awareness of the support and services available to people with learning disabilities who use harmful substances.
- Knowledge of sexual health services/education.
- Knowledge of safe sexual habits.
- Awareness of the effects of hazardous sexual behaviours.

#### What practitioners are able to do (capability/skill/ability)

- Ability to refer the person with a learning disability who is using harmful substances to the relevant support or service.
- Ability to support the person with a learning disability while he or she is receiving help from relevant services.
- Respect the rights of a person with a learning disability to engage in healthy sexual activity.
- Support families and carers to respect the right of a person with a learning disability to engage in healthy sexual activity.
- Ability to recognise when a person with a learning disability may be participating in hazardous sexual behaviours.
- Ability to refer to the appropriate sexual health services/education.
Equal Health

Equal Health
An Educational Framework on Health Equalities for People with Learning Disabilities

The Enhanced Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who have more regular and intense contact with people with learning disabilities, provide specific interventions and/or direct and manage care and services for people with learning disabilities.

Social determinants

Outcome

People with learning disability feel empowered and enabled to exercise rights and choice and to be treated with dignity and equity.

What practitioners know (knowledge)

- Understand the human and legal rights of people with learning disabilities to make decisions and take risks in the context of their own lives.
- Detailed knowledge of the principles and key provisions of legislation such as the Human Rights Act 1998, Mental Health (Care and Treatment) (Scotland) Act 2003, Adults with Incapacity Act 2000, Adult Support and Protection Act 2007 and the Equalities Act 2010.

What practitioners are able to do (capability/skill/ability)

- Actively support people with learning disabilities, their families and carers to understand the legal frameworks that support choice and decision-making.
- Apply the principles and key provisions of legislation to safeguard people with learning disabilities.
- Identify the complexities associated with learning disabilities that may have legal and ethical implications and act to safeguard the best interests of people with learning disabilities, their families and carers.
The Enhanced Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who have more regular and intense contact with people with learning disabilities, provide specific interventions and/or direct and manage care and services for people with learning disabilities.

Genetic and biological determinants

**Outcome**

*People with learning disabilities have access to quality services and can participate in community life and valued activities.*

*People with learning disabilities have both their physical and mental health comprehensively assessed and understood.*

*People with learning disabilities have a right to an individual health passport.*

**What practitioners know (knowledge)**

- In-depth knowledge of the different forms of learning disability and the particular implications and impact on the person, family and carers.

**What practitioners are able to do (capability/skill/ability)**

- Ability to assess the impact of the learning disability.
- Ability to mitigate the effects of the learning disability.

- Knowledge of how to conduct assessments of physical and mental health.
- Knowledge of how to interpret the results of physical and mental health assessments.

- Conduct or refer for annual health checks.
- Make referrals to the relevant professional depending on information from the physical and mental health assessments.

- Knowledge of a range of individual health passports.

- Develop an individual health passport for a person with a learning disability.
- Support other practitioners to make use of the individual health passport.
**Equal Health**

An Educational Framework on Health Equalities for People with Learning Disabilities

The Enhanced Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who have more regular and intense contact with people with learning disabilities, provide specific interventions and/or direct and manage care and services for people with learning disabilities.

Personal health behaviour and lifestyle risks

Outcome

People with learning disabilities and their families, friends and carers have access to information, education and support that enhances their wellbeing.

What practitioners know (knowledge)

- Understand how human rights legislation can contribute to person-centred planning for people with learning disabilities.
- Knowledge of appropriate current legislation on informed consent and confidentiality.
- Knowledge of the elements of relevant legislation that can support people with learning disabilities, such as power of attorney, guardianship and advocacy.
- Appreciate the role of families and carers who support people with learning disabilities and their right to assessment and support to promote their own health and wellbeing.

What practitioners are able to do (capability/skill/ability)

- Actively support the person with a learning disability, family and carers to exercise their rights, entitlements and choices.
- Provide information and guidance for people with learning disabilities, their families and carers regarding welfare and finance.
- Provide information for the person with a learning disability, family and carers about the ongoing implications for them of legislation regarding informed consent, guardianship, power of attorney and advocacy.
- Engage with families and carers as equal and expert partners in care and support.
The Enhanced Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required by practitioners who have more regular and intense contact with people with learning disabilities, provide specific interventions and/or direct and manage care and services for people with learning disabilities.

9. Specialist Practice Level in Health Equalities for People with Learning Disabilities
"The Health Club is really useful."

"Staff keep it real for me."

"The Community Learning Disability Team are running a really good course on relationships."
The **Specialist Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

---

**Social determinants**

**Outcome**

*People with learning disabilities live in settled and safe family accommodation or their own tenancy/ownership, reflecting their personal choice.*

*People with learning disabilities feel empowered and enabled to exercise rights and choice, maintain their identity and to be treated with dignity and equity.*

---

**What practitioners know (knowledge)**

- Comprehensive knowledge of the factors that make accommodation inappropriate.

**What practitioners are able to do (capability/skill/ability)**

- Make recommendations about a range of appropriate accommodation options using a FAIR approach.

- Comprehensive knowledge of positive approaches to enable and support people to be empowered to exercise rights and choices.

- Promote awareness of the person’s right to exercise choice, social inclusion and citizenship.

- Advanced understanding of the value of person-centred approaches in therapeutic relationships and communication.

- Advise on the use of a range of person-centred assessment approaches.
Equal Health
An Educational Framework on Health Equalities for People with Learning Disabilities

The **Specialist Practice Level in Health Equalities for People with Learning Disabilities** outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

---

**Social determinants**

**Outcome**

*People with learning disabilities are not subject to discrimination linked to ethnicity, gender, behaviours, sexuality, appearance, physical features, chronic illness or speech differences.*

*People with learning disabilities have a range of social networks.*

**What practitioners know (knowledge)**

- Comprehensive understanding of the impact that discrimination and stigma may have on the life of the person with a learning disability, family and carers.

**What practitioners are able to do (capability/skill/ability)**

- Challenge any discrimination and stigma people with learning disabilities may face in health and social care services and wider communities.
- Support people to exercise their rights if they experience discrimination and stigma.
- Comprehensive knowledge of a range of social networks.
- Promote the use of social networks for people with learning disabilities.
The Specialist Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

Social determinants

Outcome

People with learning disabilities are able to maintain valued relationships and networks and have the opportunity to develop new ones, both personal and professional.

What practitioners know (knowledge)

- Comprehensive knowledge and understanding of the principles, processes, implications and procedures involved in using self-directed support.
- Comprehensive knowledge of the principles and options for the application of outcomes- and asset-based approaches.
- In-depth knowledge of person-centred and relationship-focused approaches to the care and support of people with learning disabilities.
- Comprehensive knowledge of a range of methodologies for delivering, measuring and monitoring outcomes to ensure that the needs and wishes of people with learning disabilities, their families and carers are met.
- Comprehensive knowledge of the importance of continued engagement in valued relationships and meaningful activities for people with learning disabilities as their condition progresses.

What practitioners are able to do (capability/skill/ability)

- When appropriate to role, support the person with a learning disability, family and carers to understand and make informed choices about self-directed support.
- Support the person with a learning disability, family and carers to access self-directed support if desired.
- Promote the use of an outcomes- and asset-based approach.
- Use person-centred and empathic approaches to assessment, treatment and support for people with learning disabilities.
- Promote partnership-working.
- Promote engagement in valued relationships.
- Promote social inclusion.
Social determinants

**Outcome**

*People with learning disabilities have access to individuals, groups and organisations that can support their spiritual or personal beliefs and reflect their cultural wishes.*

**What practitioners know (knowledge)**

- Comprehensive knowledge of the risks of social isolation.
- Comprehensive knowledge of the importance for people with learning disabilities, their families and carers in engaging in socially included roles, relationships and activities that support their independence and wellbeing.
- Comprehensive knowledge of the importance of peer and community support for people with learning disabilities, their families and carers.
- Comprehensive knowledge of the importance of people maintaining the spiritual and cultural aspects of life.

**What practitioners are able to do (capability/skill/ability)**

- Promote social inclusion by demonstrating how to access community organisations and supports.
- Promote engagement with people with learning disabilities to identify their individual spiritual and cultural beliefs.
Equal Health
An Educational Framework on Health Equalities for People with Learning Disabilities

The Specialist Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

Social determinants

**Outcome**

_People with learning disabilities feel safe and secure and are able to be as independent as possible._

**What practitioners know (knowledge)**

- Comprehensive understanding of environmental adaptations that may be required.
- Expert knowledge of the range of measures that can contribute to the safety and privacy of people with learning disabilities without compromising their right to dignity or independence.
- Expert knowledge of different perceptions of risk and the range of approaches to management of risk.
- Understand the reasons and rationale behind some people having an aversion to risk-taking.

**What practitioners are able to do (capability/skill/ability)**

- Make recommendations regarding the various ways in which the environment and environmental adaptations can contribute to the person’s privacy and safety.
- Make recommendations regarding environmental design, including signage, to assist people with learning disabilities to be orientated and independent.
- Act as a source of expert advice on the benefits of risk enablement in supporting people with learning disabilities to have choice and control.
- Apply flexible and responsive approaches to eliminating risk aversion.

The Specialist Practice Level in Health Equalities for People with Learning Disabilities outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

Genetic and biological determinants

**Outcome**

*People with learning disabilities maintain their best level of physical, mental, social and emotional wellbeing.*

**What practitioners know (knowledge)**

- Comprehensive knowledge of the range of assistive and innovative technologies available to support independent living and the evidence base for their use.
- Comprehensive knowledge of the range of environmental and person-centred approaches that can promote wellbeing for people with learning disabilities.
- Expert knowledge of the range of options and interventions that support people with learning disabilities who are experiencing mental health problems.
- Expert knowledge of the complexity of diagnostic overshadowing.
- Thorough understanding of evidence-based approaches that can enhance psychological, social and physical wellbeing.

**What practitioners are able to do (capability/skill/ability)**

- Advise on environmental and person-centred approaches that promote wellbeing for people with learning disabilities.
- Provide role-appropriate social, emotional and psychological support and interventions to help people with learning disabilities, their families and carers to address mental health issues.
- Recognise and advise when diagnostic overshadowing occurs.
- Draw on a range of different social, psychological and psychosocial approaches to provide support appropriate to the person with a learning disability.
The *Specialist Practice Level in Health Equalities for People with Learning Disabilities* outlines the knowledge and skills required for practitioners who by virtue of their role or practice setting play an expert specialist role in the care, treatment and support of people with learning disabilities.

### Genetic and biological determinants

#### Outcome

*People with learning disabilities maintain their best level of physical, mental, social and emotional wellbeing. (continued)*

#### What practitioners know (knowledge)

- Comprehensive knowledge of appropriate interventions, based on a knowledge of the person with learning disabilities and behaviours that may be perceived as challenging, and the best evidence available.
- Expert knowledge of the benefits of multi-sensory stimulation, recreational activities and use of combined therapies.
- In-depth knowledge of approaches and evidence-based interventions to support people who cannot communicate their needs.
- Comprehensive knowledge of approaches that promote multidisciplinary assessment and interventions to support people with learning disabilities with behaviours perceived as challenging.

#### What practitioners are able to do (capability/skill/ability)

- Advise on appropriate interventions for people with learning disabilities who have behaviours perceived as challenging.
- Act as a source of expert advice and guidance in sensory stimulation, recreational activities and use of combined therapies.
- Expertly use person-centred interventions to support people with learning disabilities who may not be able to communicate their needs.
- Promote and lead on multidisciplinary assessment and interventions to support people with learning disabilities with behaviour that may be perceived as challenging.
