Taking Forward Positive Behavioural Support in Scotland
Outline of Presentation

• Definition of Positive Behavioural Support
• The Scottish Government PBS project
  o Rationale for PBS project
  o Overview of the PBS project
  o Findings from the PBS project
  o Recommendations
• Next steps
Defining Positive Behavioural Support
What do we Mean by PBS?

- Applied Behaviour Analysis
- An applied science
- A framework for support
- A psychological therapy
- An approach used only by specialists
- Just being person-centred
- Just being positive to people
Reviewing PBS Definitions

• 18 studies defining PBS (13 articles & 5 book chapters)
• Ranging from 1990 – 2016
• 16 from the US & 2 from the UK
• 17 different features of PBS were identified

17 Features of PBS

- Lifestyle change
- Functional analysis
- Multi-component
- Environmental change
- Antecedent manipulation
- Teaching new skills
- Use of reinforcement
- Non-aversive
- Includes reactive strategies
- Social validity
- Systems change
- Data driven
- Ecological validity
- Stakeholder participation
- Contextual fit
- Person-centred
- Use of other approaches
Descriptions of Features

• Based on Functional Assessment
  o Functional assessment is used in order to understand what purpose behaviours serve and what events are likely to maintain the behaviour
  o Ensuring a direct link between functional assessment and support plans/interventions

• Multi-component
  o Simultaneous manipulation of many variables as challenging behaviour is often maintained by multiple variables
  o Interventions include changing antecedents, teaching new skills & behaviours, use of reinforcement and reactive strategies
Descriptions of Features

• Environmental Change
  o A belief that challenging behaviours are a product of the person’s environment and that many people with learning disabilities live within barren, unstimulating and difficult environments; PBS therefore incorporates broad and lasting changes to the environment in order to address challenging behaviour
  o A wide range of variables is addressed, e.g. relationships, employment, activities, leisure, skills, staffing, diet, routines, physical environment, instructional methods

• Contextual Fit
  o Interventions must fit with the values, skills, resources & social context of the stakeholders
Descriptions of Features

• Ecological Validity
  o Involvement of ‘typical agents’ in implementing the intervention, i.e. family and ordinary support staff, rather than researchers or behaviour specialists
  o Use of natural settings to implement the intervention, e.g. home or community, rather than wards, specialist units or institutions

• Data Driven
  o All decisions about interventions are evidence-based
  o Monitoring & evaluation of the effectiveness of PBS interventions are essential and are based on the collection of data about the individual and a range of aspects of their life
# Key Features of PBS

PBS Definition

1. **Use of Behavioural Technology**
   - **Functional analysis** as the basis of all interventions
   - **Multi-component** interventions: including **environmental** change, **antecedent** manipulation, **teaching** adaptive behaviours, use of **reinforcement** and **reactive** strategies
   - Systematic use of **data** to inform & evaluate interventions
   - Use of other evidence-based **approaches**
PBS Definition

2. Based on Specific Values

- Person-centred values and beliefs underlie PBS
- Non-aversive & respectful: interventions must be socially valid and comparable to those for non-disabled individuals
- Involvement of stakeholders: family & friends must inform the intervention process, agree strategies and evaluate effectiveness
- Contextual fit: interventions must make sense for the values, skills & resources of these stakeholders
- Ecological validity: involvement of ‘typical agents’ in implementing the intervention, i.e. family and ordinary support staff
PBS Definition

3. **Focus on Quality of Life**
   - Primary goal of PBS, non-contingent & non-negotiable
   - Long-term focus to achieve generalised & lasting changes
   - Includes improved relationships, increased community integration, greater self-confidence, increased choice and a fuller range of opportunities

4. **Commitment to Systems Change**
   - A belief that meaningful and lasting change is only possible if organisations and systems around people are changed
   - A good PBS plan is not enough, organisational systems must be introduced to support this and ensure its implementation
## Why Does it Matter?

<table>
<thead>
<tr>
<th>If PBS doesn’t include…</th>
<th>What is the impact?</th>
</tr>
</thead>
</table>
| Behavioural technology  | • Ineffective interventions that don’t change behaviour  
                          • Just being nice to people, but not helping them  
                          • Lack of understanding why behaviours occur & how to change them |
| A specific value base   | • Strategies are only valued for their effectiveness, not how they treat people  
                          • Specialists are seen as knowing better  
                          • The voice of the individual is not heard or valued |
| A focus on quality of life | • Changes in behaviour, but no better life experience  
                          • Focus moves to stopping challenges, not improving lives  
                          • Short-term changes which revert over time |
| A commitment to systems change | • PBS never achieves wide coverage  
                          • Individual PBS is not supported by the whole organisation or environment & is likely to be less successful  
                          • PBS appears to be time-consuming, expensive & unrealistic |
The Scottish Government’s PBS Project
Rationale for PBS Project

Keys to Life Recommendation (2013):

building capacity to deliver specialist services locally, with an outcome that people with learning disabilities and complex needs should be supported to live nearer their family

People with learning disabilities are able to live independently in the community with equal access to all aspects of society
Rationale for PBS Project

• Range of evidence-based research on the effectiveness of PBS for people with learning disabilities & complex needs

• PBS is likely to be part of the solution for out-of-area placements & delayed discharge

• No current Scottish guidance re PBS – a range of English guidance exists...ambition is to make this more specific for Scotland
Areas to Consider

• A Scottish perspective on PBS
• SG policy statement re PBS
• Use of PBS in commissioning
• PBS inspection criteria
• PBS standards for service providers
• Workforce development in PBS
• Accredited training in PBS
Overview of PBS Project

Consultation with a range of stakeholders:

- Parents & carers
- Health care staff (psychology, LD nursing; CAMHS)
- Social care staff (service providers; commissioners; care managers)
- PBS training providers
- Others (SG policy colleagues; NES colleagues; SCLD; English colleagues)
Overview of PBS Project

Questionnaire about PBS:

• Is there a PBS policy in place
• How is PBS implemented
• Who supports the implementation
• Is there PBS mentoring or supervision
• What PBS training is delivered, by whom & to whom
• How are trainers trained & supported
• How is PBS evaluated
Questionnaire Response

Responses:
• 12 (out of 14) Health Boards
• 10 individual HSCP
• 9 social care providers (private & 3rd sector)
• 3 family carer groups
• No focus on education or children’s services
Findings: Use of PBS

• Some confusion about what PBS is
• Mixing PBS with physical management training
• Limited use of PBS by social care service providers
• Many providers have no PBS policy
• More evidence of PBS use within health services
Findings: PBS Training

- PBS training is ad hoc & piecemeal
- No clear standard of levels of PBS training required
- Inconsistency re who can provide PBS training
- Main training is *Improving Practice*
- Need a wider range of training options
- PBS training can be very expensive
Findings: Implementation

- Implementation is a key issue
- Organisational systems are needed to support implementation
- Mentoring by more experienced PBS practitioner is essential
- Limited evaluation of impact of PBS
- Evidence of more widespread use of PBS in England – lessons to be learned
Recommendations

- Skill up social care providers in PBS
- Develop a range of training options & levels
- Accredited training available in Scotland
- Competency framework for PBS
- Training linked to competency framework
- Supervision & mentoring support for PBS – importance of practice leadership
Recommendations

- Organisational commitment to PBS at highest level
- National group to lead on PBS practice – virtual & face-to-face
- PBS commissioning & inspection standards
- Developing the evidence base for PBS in Scotland through evaluation & research
- Build momentum...
What Happens Next?

• Setting up the Community of Practice
  o Health & social care
  o Academics & researchers
  o Family carers & carers’ groups
  o Care Inspectorate & Mental Welfare Commission
• Taking forward a PBS training strategy
• Developing a PBS pathway
• Considering next steps for PBS for children & education
